Colville Confederated Tribes Broadband Initiatives

The Colville Confederated Tribes is in the process of preparing grant applications for broadband strategy initiatives pertaining to our reservation communities. The Colville Confederated tribes lacks high speed (broadband) and telecommunications infrastructure to bring economic opportunity to our small, socioeconomically disadvantaged communities.

The Colville Confederated Tribes lack of broadband and telecommunications in the north eastern & central region of Washington is at a disadvantage without broadband and telecommunications infrastructure for critical economic development opportunities, educational expansion, vocational services employment and economic mobility opportunities. The existing and incumbent services in our reservation communities are either limited, unreliable and prohibitively expensive or non-existent.

It is important that we get the participation of the tribal and non-member stakeholders who reside within the reservation boundaries by providing their personal testimony why you support the Colville Confederated Tribes Broadband Initiatives for our reservation communities. It is vitally important that each participant emphasizes the need for High Speed Internet (broadband) and or telecommunications infrastructure and how it will improve your quality way of living. For your convenience attached is the "Letter of Support" that will need to be completed, signed and submitted to the Colville Confederated Tribes Information Technology Division.

The signed letters of support can be submitted in the following manner:

U.S. Mail or Physical Delivery to:
CCT Information Technology Division
P.O. Box 150
Nespelem, WA 99155

Scan and Email to:
